### **Introduction**

This report illustrates the airport system in Missouri and highlights areas within the state that are near larger aircraft facilities. Using Geographic Information Systems (GIS), the population and area of the state near large aircraft facilities is also calculated.

Airports have long been a vital part of many communities and in our fast-paced society, they are becoming even more important. Airports offer quick access to locations throughout the country and provide a means of cost-effective cargo and package transport. Communities near airports suitable for large business aircraft or passenger jet service can also promote tourism and attract corporate headquarters and back offices, large-scale manufacturers, and other businesses that require such services. Progressive transportation systems now rely on multi-modal, connected alternatives to meet the needs of a mobile society and airports are a key element.

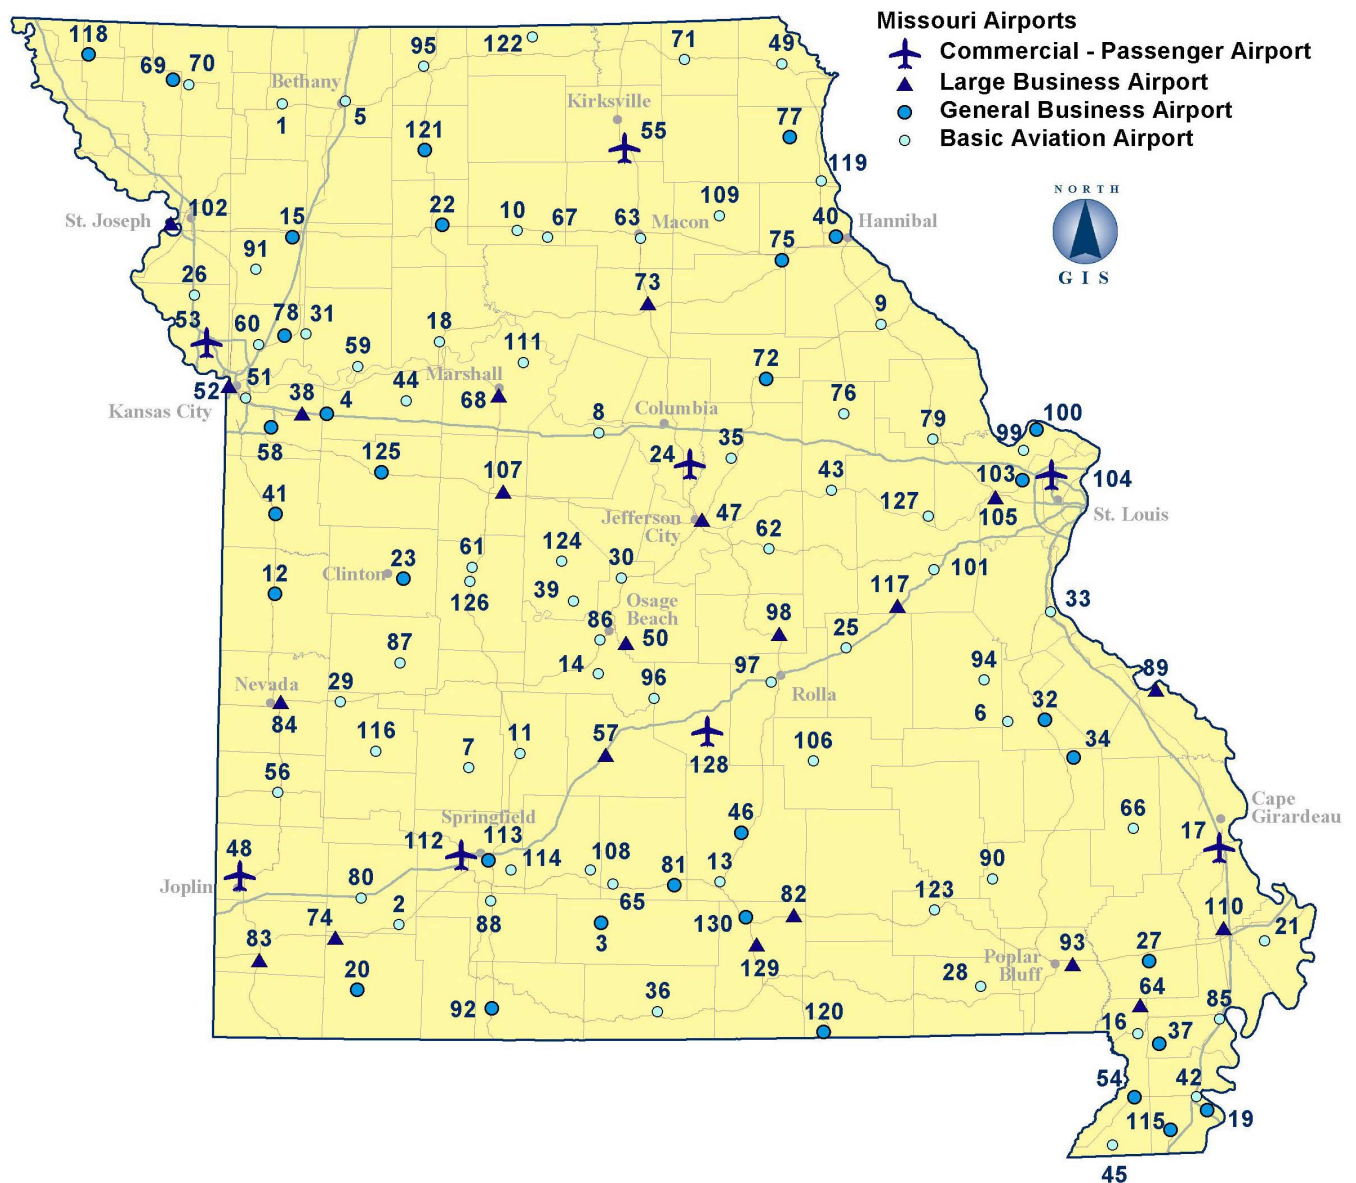

Each year over 160,000 tons of cargo and 20 million airline passengers are transported in Missouri by air.<sup>1</sup> The airport system of Missouri consists of approximately 130 public-use airports. Two airports, Lambert International in St. Louis and Kansas City International, support major commercial-passenger traffic. Six other airports in Cape Girardeau, Columbia, Joplin, Ft. Leonard Wood, Kirksville, and Springfield provide regional commercial-passenger services. The remaining airports support a variety of needs from large business to general business to basic aviation facilities.

## Missouri Airports Map

This map displays airports throughout Missouri and references them by a number. Commercial-passenger airports have scheduled commercial aircraft traffic and generally have runway lengths greater than 7,000 ft. Large business airports have runway lengths normally ranging from 4,500 to 7,000 ft. and also provide jet fuel. General business airports typically have runways lengths between 3,500 to 4,500 ft. and usually serve smaller jet or turboprop aircraft. All other airports are categorized as basic aviation. Please refer to the map index on the next page for additional information.

## Commercial-Passenger Airports Map

Airports with commercial-passenger service offer scheduled airline, corporate, charter and freight services and support large commercial aircraft. Typical runways are 7,000 ft. or longer.

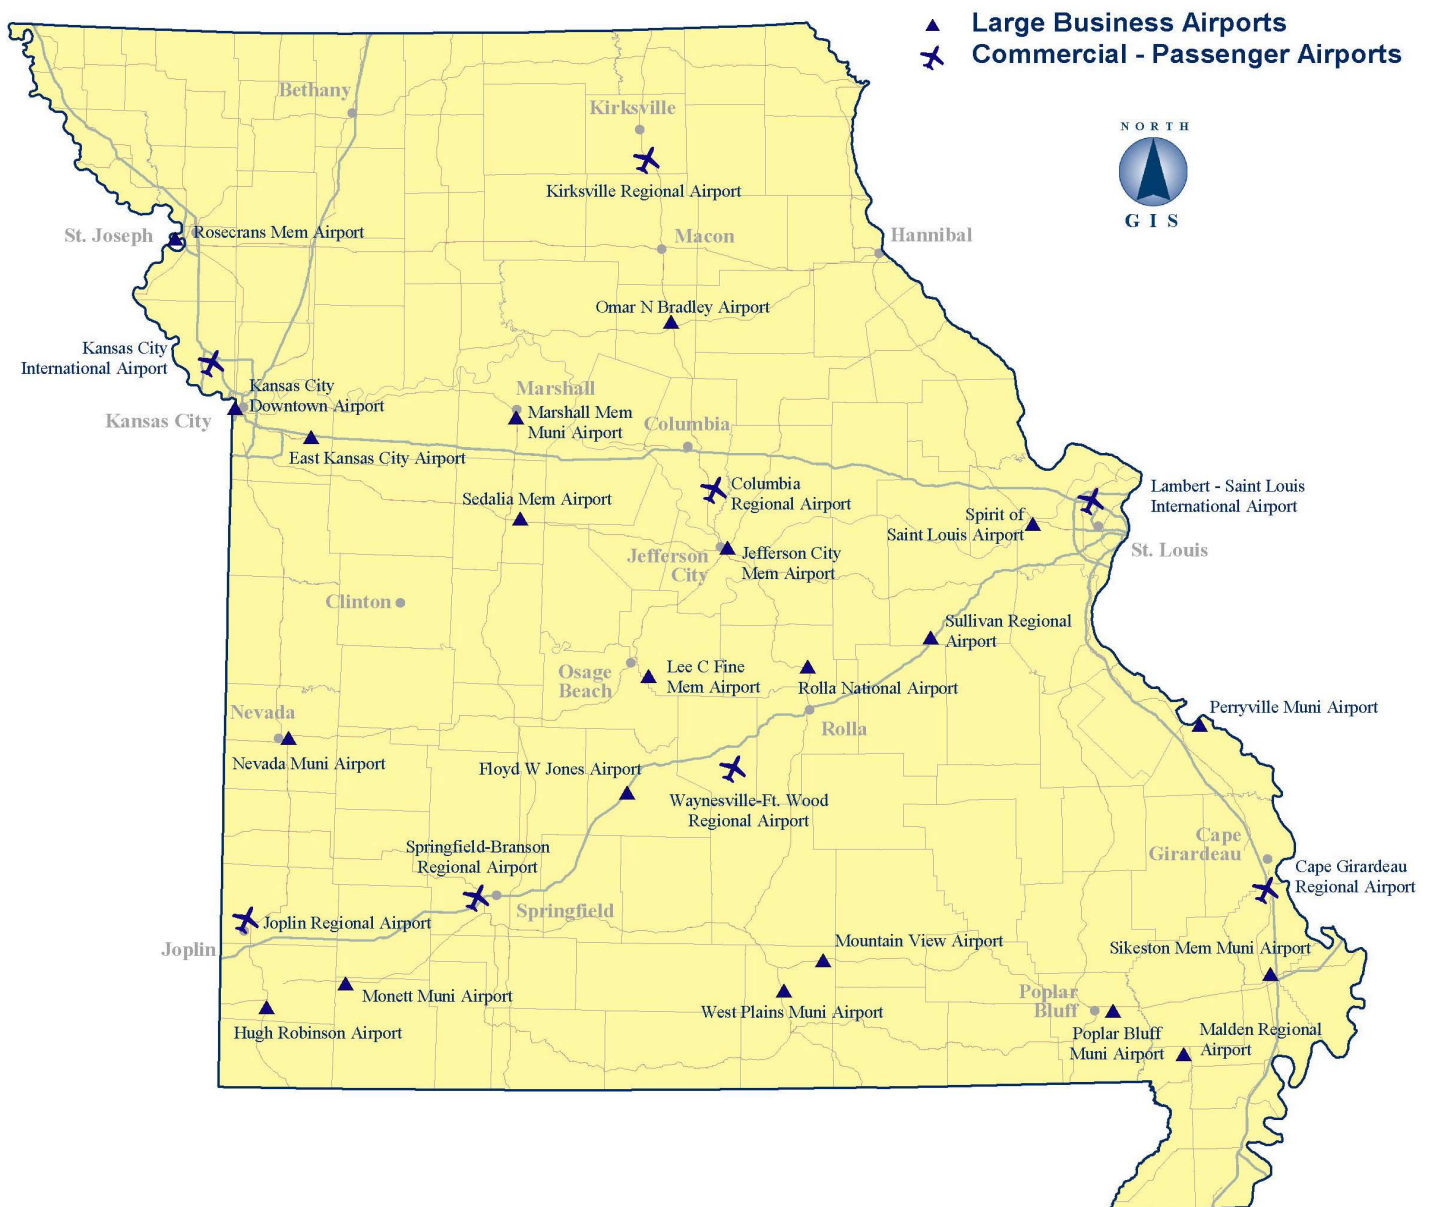

## Areas within 25 to 50 Miles of a Commercial-Passenger Airport

Close proximity to commercial-passenger airports is a major selling point for local communities attempting to attract new industries. The map below shows areas in the state within 25 to 50 miles of these facilities.

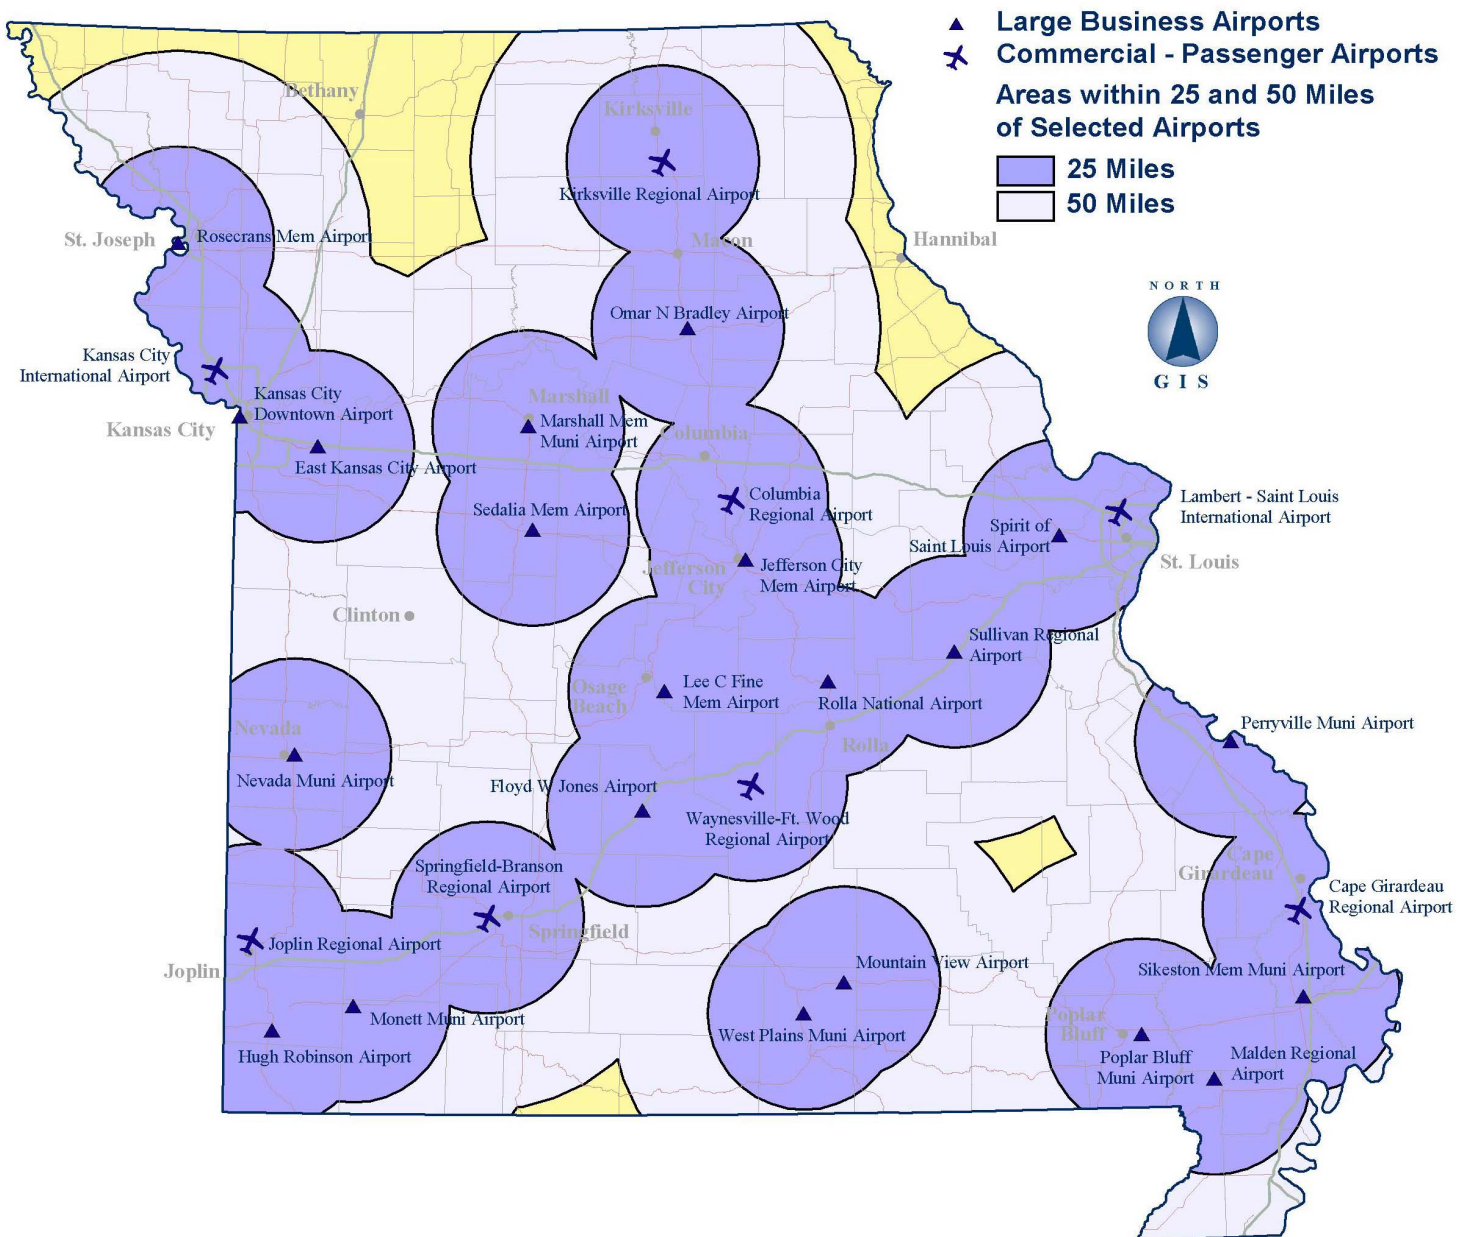

## Large Business Airports Map

This map combines large landing site airports with commercial-passenger airports. Large business airports offer an alternative for corporate jets and provide regional access to many parts of Missouri. Large business airports typically have runway lengths of 4,500 - 7,000 ft. and provide jet fuel.

## Areas within 25 to 50 Miles of a Large Business Airport

Large business airports provide an alternative gateway to Missouri communities and save corporate clients valuable time in this fast-paced economy. The map below shows areas in the state within 25 to 50 miles of a large business or commercial-passenger airport.

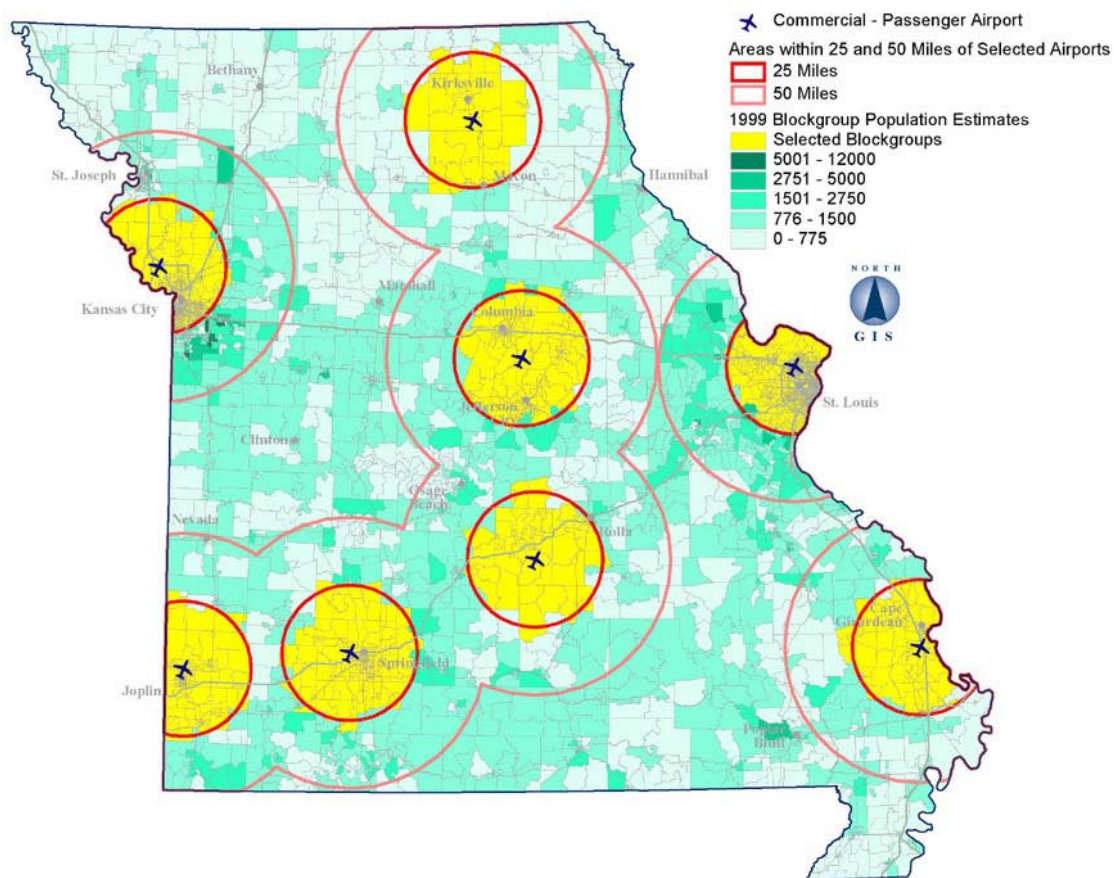

## Land Area and Population Statistics Near Selected Airports

The table below shows the approximate percentage of Missouri land area and population that is within a 25 to 50 miles radius of commercial-passenger and large business airports.<sup>2</sup> The map shows that 59% of Missouri's population is within 25 miles of a commercial-passenger airport. This number increases to 83% when large business airports are considered. Missouri has excellent airport coverage.

**Table 1 - Land Area and Population Percentages within a Radius of Selected Airports**

Commercial-Passenger (CP) Airports		Large Business or CP Airports	
25 Mi. Radius	50 Mi. Radius	25 Mi. Radius	50 Mi. Radius
18% of Land Area	62% of Land Area	54% of Land Area	93% of Land Area
59% of Population	87% of Population	83% of Population	98% of Population

<sup>2</sup> The 1999 population estimates are derived from block groups whose center falls within the 25 or 50 mile radius. Population estimates from Easy Analytic Software, Inc.
